SEMINARIO VIRTUAL

Medición del impacto climático de los bancos para facilitar el alineamiento de carteras con el acuerdo de París

28 abril, 2020 16:00 – 17:00 CEST

Panelistas

María Eugenia Sosa Taborda

Coordinadora de la Red de América Latina y el Caribe

Angélica Afanador

Consultora Gerente en Guidehouse y Miembro del Secretariado de PCAF

Tjeerd Krumpelman

Jefe Global de Asesoría, Reporte y Participación Empresarial

Aligning financial portfolios with climate policy objectives

The Principles for Responsible Banking

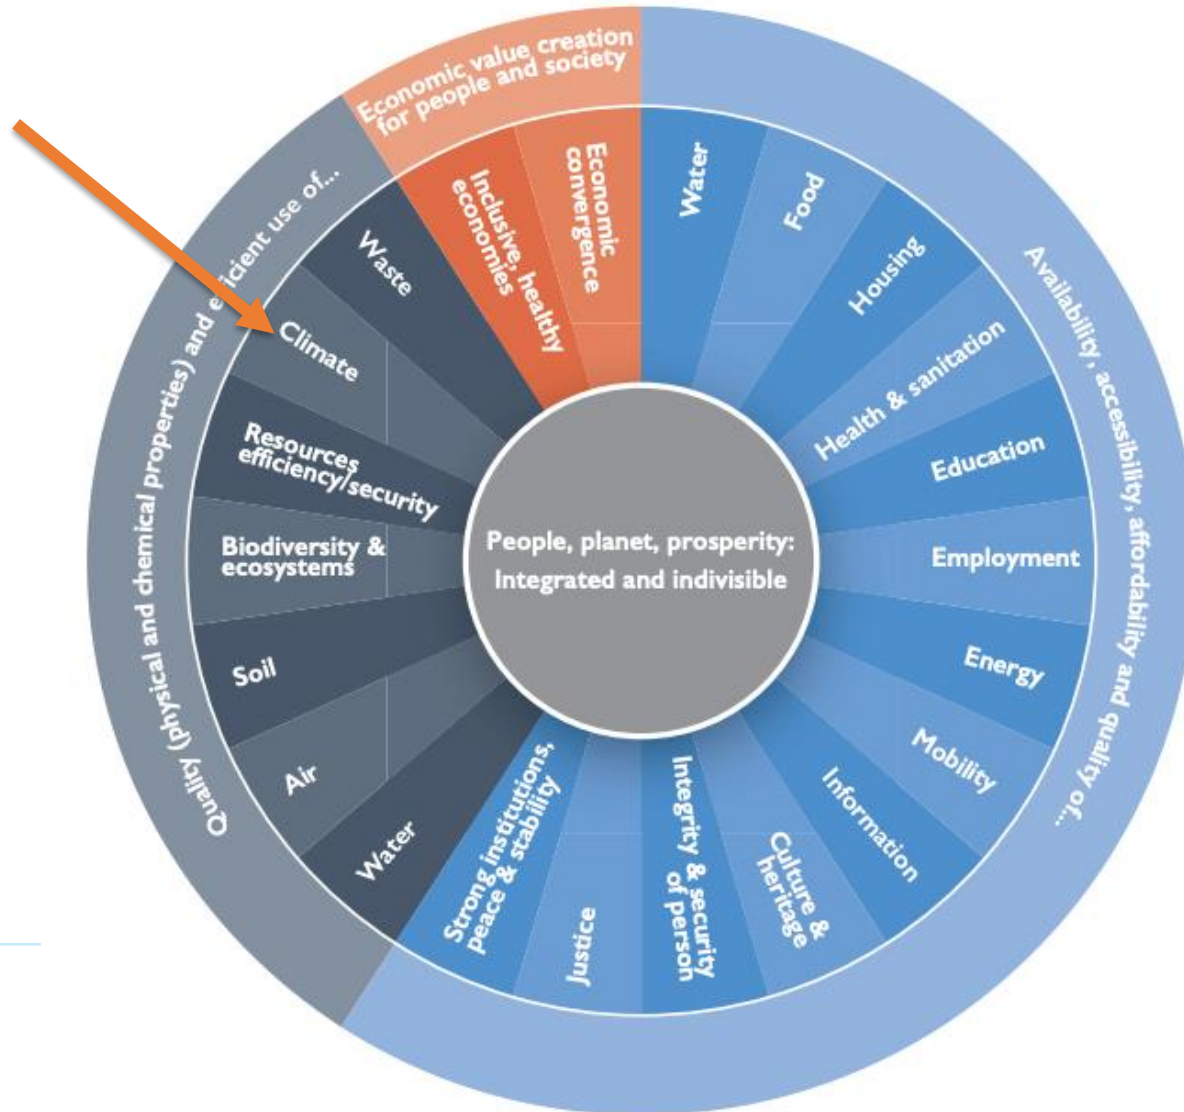

Key Steps to be Implemented by Signatories

The Principles for Responsible Banking require your bank to take three key steps to ensure the effective implementation of the Principles, and to enable your bank to continuously improve its impact and contribution to society:

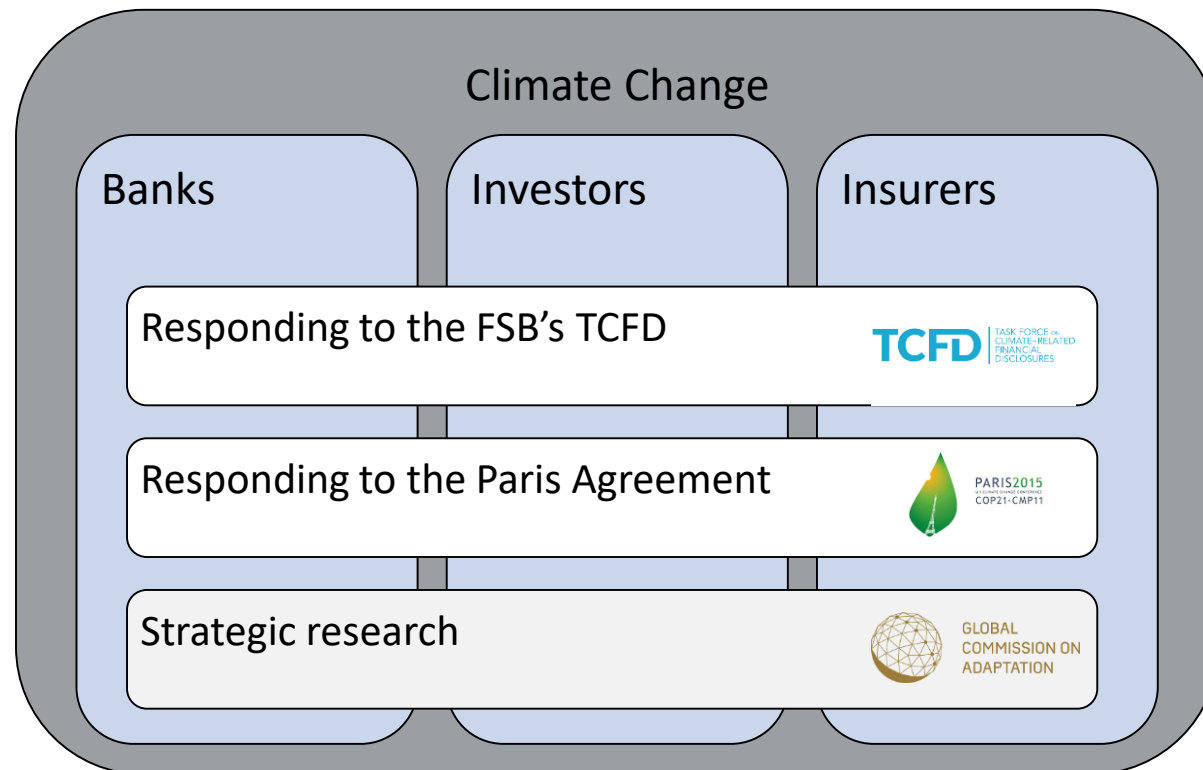

Within 4 years, your bank should have implemented the required steps regarding impact analysis, target setting & implementation, and accountability.

Step 1: Impact Analysis

Climate Change Workstreams at UNEP FI

Time line

2009
First ever finance sector supplement on sustainability reporting

FIs disclosing on sustainability

2013
Why and how investors should measure and disclose carbon

FIs assessing and disclosing carbon/transition risks

2015
FI guidelines to identify, assess, manage carbon risks

2015-2017
What comes after risk disclosure?
Risk mitigation action.

FIs mitigating transition risks

2018
Recommendations for assessing Transition Risks

TCFD Recommendations

2018
Recommendations for assessing Physical Risks

COLLECTIVE COMMITMENT TO CLIMATE ACTION

- The Collective Commitment to Climate Action sets out concrete and time-bound actions that banks will take to scale up their contribution to and align their lending with the objectives of the Paris Agreement on Climate, including:
- aligning their portfolios to reflect and finance the low-carbon, climate-resilient economy required to limit global warming to well-below 2, striving for 1.5 degrees Celsius;
- taking concrete action, within a year of joining, and use their products, services and client relationships to facilitate the economic transition required to achieve climate neutrality;
- being publicly accountable for their climate impact and progress on these commitments.

From TCFD Adoption to PA Alignment

Role of scenarios

- Both require a **forward-looking** stance. Both are **scenario-based**
- **TCFD** is about considering and assessing scenarios **across** emissions pathways and across temperature outcomes
- **PAA** is about focusing on one outcome: 'well below 2 degrees'

Inward vs outward-looking

- **TCFD** is 'inward-looking' - assessing the implications of each such scenario on portfolios
- **PAA** is 'outward-looking' – making portfolios consistent with a 'well below two degree scenario'
- **PAA** is both normative & required

How banks can deliver on climate change

Current situation:

1. Choose Methodology
2. Decide on portfolio coverage
3. Collect data
4. Assess portfolio
5. Select Scenario
6. Calculate baseline and delta

11

Partnership for Carbon Accounting Financials

Apoyo a bancos de América Latina en la medición de emisiones financiadas

April 28, 2020

PCAF facilita la medición de las emisiones de GEI financiadas por préstamos e inversiones

Existing collaborative climate initiatives supporting FIs on climate actions
as of December 31, 2019

La medición de emisiones financiadas es uno de los eslabones de la cadena que permite a los bancos medir, reportar y alinear carteras con el Acuerdo de París

Medir emisiones financiadas es la base para hacer análisis de escenarios, fijar objetivos, tomar acción y reportar

Scenario analysis

Measuring exposure to risks posed by climate-related policies and regulations

Target setting

Identifying the baseline emission intensity and measuring progress against the set target.

Climate action

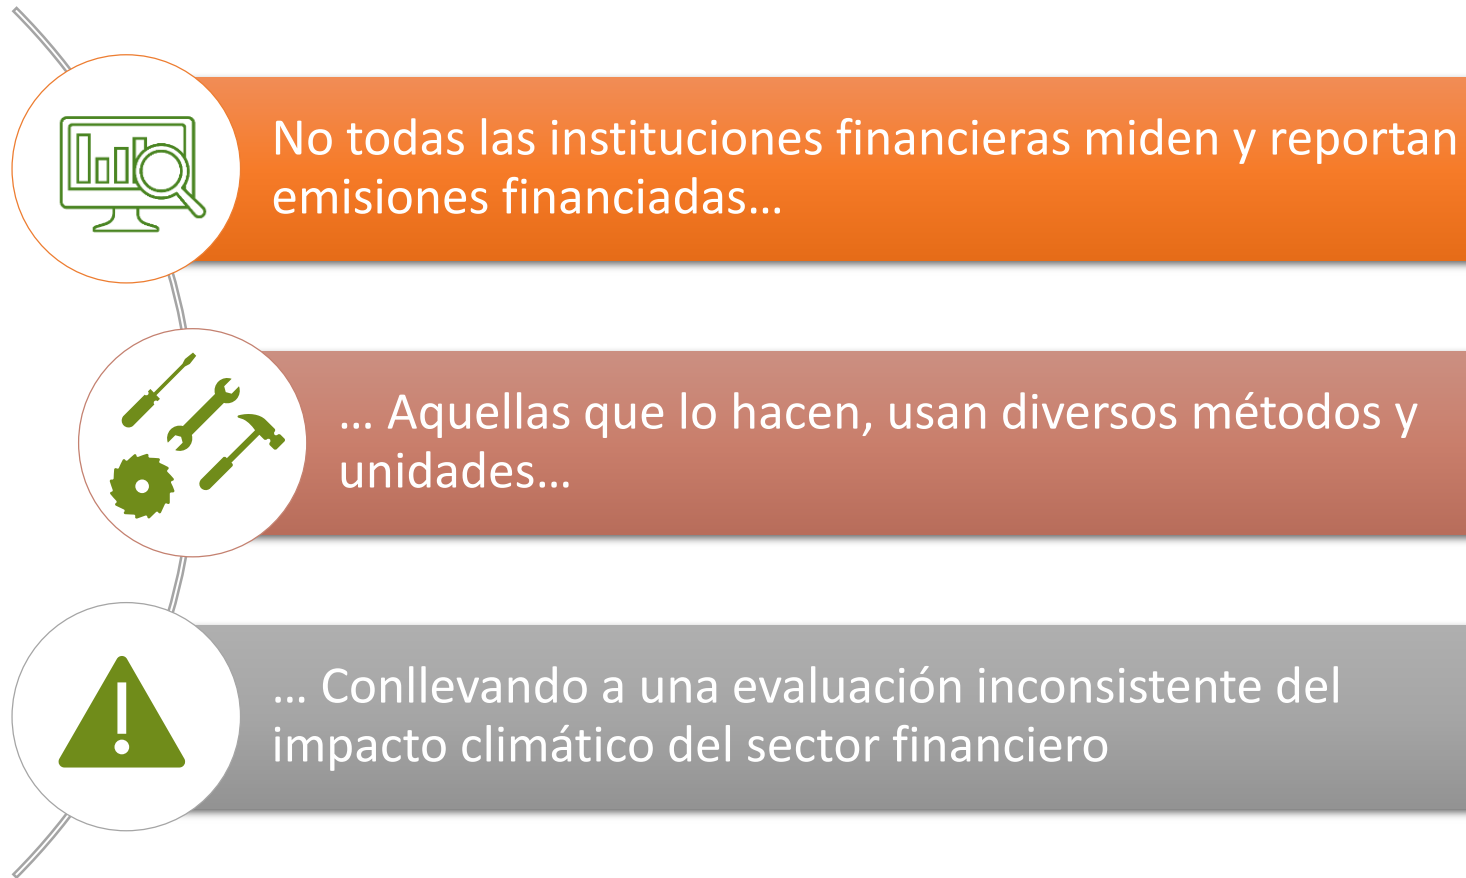

Understanding portfolios' climate impact to enable informed climate action

Reporting

Disclosing financed emissions and tracking progress

Sin embargo, hasta hace poco no existía una metodología armonizada y transparente

...Para resolver este problema, un grupo de bancos e inversionistas decidió crear PCAF

2015: Holanda

- **18** bancos, fondos de pension, gestores de inversion, aseguradoras etc.
- Liderado por ASN Bank
- Métodos para 8 activos

2018: Norte América

- **12** bancos en EEUU y Canadá
- Liderado por Amalgamated Bank
- Métodos para 6 activos

2019: Global

- Iniciado por ABN AMRO, Amalgamated Bank, Triodos Bank, ASN Bank y Global Alliance for Banking on Values
- +50 instituciones comprometidas con PCAF desde el inicio

2022: Global

- PCAF aspira a min. 250 participantes al final del 2022.

A la fecha, hay cerca de 60 instituciones participando en PCAF y colaborando para lograr dos objetivos

La lista de participantes de PCAF [aquí](#)

Objetivos de PCAF

1

Crear el Estándar Global de Contabilidad de Emisiones GEI para el sector financiero

2

Incrementar el número de instituciones financieras (min. 250) que usan el Estándar y reportan emisiones financiadas

Desde el 2015, los participantes de PCAF han creado métodos de contabilidad de emisiones GEI para 10 tipos de activos

Cinco reportes publicados por los equipos de Holanda y Norte América. Los reportes más recientes son de finales del 2019.

10 tipos de activos

Bonos soberanos

Capital cotizado en bolsa

Financiación de proyectos

Hipotecas residenciales

Hipotecas comerciales

Deuda corporativa

Crédito corporativo

Inversiones indirectas

Crédito automotor

Crédito público

El Core Team de PCAF actualmente desarrolla el Estándar de Contabilidad de Emisiones Financiadas

El Estándar se basa en el Protocolo de Gases de Efecto Invernadero, el cual ofrece una guía general de medición de emisiones para el sector financiero

Emissions*

$$= \sum_i \text{Attribution share in investee}_i \quad \times \quad \text{Emissions of investee}_i \quad (\text{with } i = \text{investee})$$

$$\frac{\text{Investment}_i}{\text{Investee equity}_i + \text{Investee debt}_i}$$

- (Option 1) Reported Emissions_i
- (Option 2) Physical Activity Data_i x Emission Factor
- (Option 3) Economic Activity Data_i x Emission Factor

Hierarchy of preference

Data availability & data needs

Investment information in numerator (i.e. outstanding investment value) is readily available to FIs.
 Information on investee equity and debt is often also readily available to banks OR has to be collected from the investee's balance sheet (or other data portals).

Three options to derive emissions in order of preference:
 (1) directly derives investee emissions from reports/databases
 (2) & (3) indirectly derive investee emissions by linking investee specific activity or economic data with emission factors

* Note that the same approach is also used to calculate the other climate impact types: avoided emissions & carbon sequestration.

Reconociendo el reto que presenta el acceso a datos, PCAF está creando una base de datos con factores de emisión

- Fácil de usar para aplicar los métodos de PCAF y empezar la medición de impacto climático
- Permite un análisis de hotspots para identificar las áreas de la cartera de mayor impacto climático

The screenshot shows the PCAF emission factor database interface. It includes a navigation bar, a search bar, and a table of emission factors. Callouts highlight specific features:

- “Administration hub”** with information on defined data lists, tracking of changes (logs) and user info
- “Tool bar I”** with page selection, an adding function for new emission factors, an refreshing function plus an exporting and printing function
- “Tool bar II”** with quick search function, filter edits, sort function and page settings
- “Database”** with overview of all emission factors: Rows with emission factors, Columns with specific information

Actions	Id	Region	Country	Asset Class	Emission Type	Sector	Subsector	Subsubsector	Functional Unit Of Emission Factor 1	Functional Unit Of Emission Factor Description	Functional Unit Of Emission Factor 2	Emission Factor Unit	Quality	Scope 1 Emission Factor	Scope 2 Emission Factor	Scope 3 Emission Factor	Generic Emission Factor

- Factores de emisión disponibles al público en todas las geografías y clases de activos.
- V.g. Para préstamos corporativos en sus países: factores de emisiones promedio del sector (i.e. tCO₂e por ingresos, por activos totales y por indicadores de actividad física).
- Uso gratis para participantes de PCAF
- Incluye calificación de calidad de datos

Por el principio de transparencia, el uso de datos para la evaluación de impacto va acompañado de un scorecard de calidad de datos

More certain

Less certain

Score	Level	Broad description	Data requirements	Units	Source
1	Investee	Audited GHG emissions + known financial data	Audited GHG emissions data from investees	tCO2e	Reported by investees (e.g. through CDP, Bloomberg, public databases like eGRID, company reports)
			Outstanding loan value	USD	Bank
			Investee balance sheet total	USD	Bank or data sources (e.g. CapIQ, Bloomberg, company reports)
2		Unaudited GHG emissions + known financial data	Unaudited GHG emissions data from investees	tCO2e	Reported by investees (e.g. through CDP, Bloomberg, public databases like eGRID, company reports)
			Outstanding loan value	USD	Bank
			Investee balance sheet total	USD	Bank or data sources (e.g. CapIQ, Bloomberg, company reports)
3		Estimated GHG emissions + known financial data	Activity data reported to bank by investee	What company produces	Reported by company (e.g., CDP, annual reports)
			Emission factor for physical activity	tCO2e/activity indicator	PCAF database
			Outstanding loan value	USD	Bank
	Investee balance sheet total		USD	Bank or data sources (e.g. CapIQ, Bloomberg, company reports)	
4	Sector	Estimated GHG emissions + known financial data	Estimated sector emissions (5 or 6 digit NAICS code) per \$ revenue	tCO2e / USD	PCAF database
			Revenue data of investee (USD)	USD	Bank
			Outstanding loan value (USD)	USD	Bank or data sources (e.g. CapIQ, Bloomberg, company reports)
			Investee balance sheet total (USD)	USD	Bank or data sources (e.g. CapIQ, Bloomberg, company reports)
5	Estimated GHG emissions + estimated financial data	Estimated sector emissions (3 or 4 digit NAICS/GICS code) per \$ of assets	tCO2e / USD	PCAF database	
		Outstanding loan value	USD	Bank

PCAF and ABN AMRO

Tjeerd Krumpelman
Group Sustainability, ABN AMRO

28 April 2020

PCAF and carbon accounting

- Both for risk indicators (effect on the world on you) or impact indicators (effect of you on the world), it is important to deduct the financed climate impact (CO₂e) in a uniform and transparent manner.
- Carbon accounting does that, it gives the financial institution a tool to measure the impact of its portfolio and provides a starting point from which reduction and risk strategies can be formulated and measured.
- There is no uniform, transparent and widely accepted methodology yet. This is the goal of PCAF.

A 3 step programme: Measuring, reporting & steering

1. Measure

2. Report

3. Steer

PCAF Methodology retail mortgages - Measure

- Use CBS data for the average energy use per label.
- The emission factors are based on information from the Netherlands. (<https://www.co2emissiefactoren.nl/>)

A: Average energy use per label (gas and electricity)

B: Emissions factors gas and electricity (Netherlands)

C: CO₂ emissions gas and electricity per energy label

D: Number of objects per energy label

E: Total CO₂ emissions per energy label (Kton GHG)

$$A \times B = C$$

$$C \times D = E$$

Retail Banking

CO₂ emission: Retail mortgages portfolio

Energy label	A	B	C	D	E	F	G	Out of scope ¹	CRE	Total
Percentage in portfolio	13.00%	17.00%	29.60%	9.00%	8.00%	10.50%	11.50%	1.40%	0.02%	100%
Number of objects	104,657	136,993	238,406	72,107	64,271	84,270	92,146	11,561	167	804,578
Exposure in € bln ²	27,650	26,988	37,828	13,634	10,508	16,480	19,402	3,303	79	155,872
Total CO₂ emissions in Kton	378	487	874	276	261	370	392	45	214	3,082

Source: A report by ABN AMRO: "Sustainability facts and figures & Engagement 2018." Based on the PCAF methodology.

PCAF Methodology lending portfolio - Measure

- Used when the borrower does not report on GHG emissions
- When the transaction does not involve detailed due diligence and monitoring
- Use CBS data on country's emissions per NACE sector and country's financial balances per NACE sector

- A: Country emissions per NACE sector (ton GHG)
- B: Country financial balances per NACE sector (M€)
- C: Emission factor per NACE sector (ton GHG/M€)
- D: Company's lending portfolio (M€)
- E: Financed emissions per NACE sector for the company's lending portfolio (ton GHG)

$$\begin{array}{c} \text{A} \div \text{B} = \text{C} \\ \text{C} \times \text{D} = \text{E} \end{array}$$

Emissions lending portfolio ABN AMRO - Report

NACE Sectors	ABN AMRO 2018	
	Financial balance in mln per sector (€)	GHGe in ktors per sector
Agriculture (A)	8,409	8,014
Minerals (B)	4,731	126
Industry (C)	18,834	940
Utilities (D)	1,967	1,146
Water distribution (E)	879	517
Construction (F)	2,831	116
Retail (G)	25,137	240
Transport (H)	14,350	2,727
Leisure (I)	1,465	73
Information and communication (J)	2,893	6
Administrative services (N)	5,916	140

1. **Measure** carbon by use of PCAF methodology
 2. **Report** on carbon in- and externally
 3. **Steer** on carbon reduction using SBT
-

‘Mission 2030’: ambition to ensure that all of the homes and offices financed by ABN AMRO (*EUR 185 billion*) will have an average energy label ‘A’ by 2030.

Paris Proof example - Steer

The Paris Agreement stipulates that office buildings may use a maximum of 50 kilowatt hours per square meter per year in order to be 'Paris Proof'.

We are going to reduce our own energy consumption, this by making all our offices Paris Proof by 2030.

A total of more than 12.3 million kilowatt hours of electricity must be saved (current use of the buildings is 34 million kilowatt hours). Besides that, gas should not be used anymore in the buildings for a saving of 1.1 million cubic meters of gas. With this we will save 6,371 tons of CO₂ emissions annually.

Thank you
